

EnCarp

Employer car parks are a significant business cost. Unnecessary car use also has a major environmental cost. Transport is one of the largest and fastest growing sources of greenhouse gas emissions, leading to climate change. The twin issues of spiralling transport costs and concern over climate change means there has never been a better time to improve transport efficiency.

EnCarp is a car parking management software program that enables employers to optimise the effectiveness of their car parking space. It is the world's first program that can allocate parking bays in a simple, yet sophisticated manner. Prioritising specific users, such as car poolers is just one of its many applications. EnCarp also allows businesses to effortlessly track usage, detect empty bays, manage incidents and calculate Fringe Benefit Tax.

Contact Envision to learn how Encarp can help improve the efficiency of your car parking, reduce costs and improve environmental performance.
