

## EnCarp

Employer car parks are a significant business cost. Unnecessary car use also has a major environmental cost. Transport is one of the largest and fastest growing sources of greenhouse gas emissions, leading to climate change. The twin issues of spiralling transport costs and concern over climate change means there has never been a better time to improve transport efficiency.

EnCarp is a car parking management software program that enables employers to optimise the effectiveness of their car parking space. It is the world's first program that can allocate parking bays in a simple, yet sophisticated manner. Prioritising specific users, such as car poolers is just one of its many applications. EnCarp also allows businesses to effortlessly track usage, detect empty bays, manage incidents and calculate Fringe Benefit Tax.

**"The highest reward for a person's toil is not what they get for it but what they become by IT"**  
**--John Ruskin**

Envigreen products to promote environment are well known in the environment arena. Envigreen however holds a much larger profile as specialist software solutions developer for Environment Industry. As Environment Specialist IT service provider, it develops Custom software for Environment Promotion, Assessment, Alleviation and Trading. Envigreen provides value in fine understanding of both Environment issues and technology. We blend this with our years of product development experience to develop products and programs that go a long way to promote environment.

Whether you are a business, government, entrepreneur or corporate giant, when you have to build a successful product or initiative, Envigreen is your partner.

## Envision & TravelSmart Carpooling

Transport accounts for over one third of household greenhouse gas emissions and is a major cost to the community. Rising concern over the need to tackle climate change and spiralling fuel costs mean there has never been a better time to promote sustainable transport.

Envision & TravelSmart Carpooling programs allow organisations to match staff with compatible travel patterns and reduce costly and inefficient single occupant journeys. By sharing the cost of driving, our car pooling program reduces greenhouse gas emissions, congestion and car parking requirements. It's also a great way for staff to socialise, network and build a sense of community.

## Envision Green Travel

Spiralling traffic congestion, fuel prices and concern over climate change are all great reasons to promote smarter travel behaviour in the workplace. Car use is one of the largest and fastest growing sources of greenhouse gas emissions. Organisations are now looking for ways of reducing unnecessary car use.

Envision's Green Travel software package is an innovative, easy-to-use application that rewards and recognises efforts to reduce single occupant driving. Green Travel allows staff to monitor their travel behaviour and receive points for using green travel modes. Accumulated points are automatically calculated and staff receive awards from their organisation for reducing individual car use.

Green Travel is a great way to promote organisational sustainability, reduce transport costs and car parking requirements.

## Going Places

Going Places program encourages sustainable travel and builds a sense of community in enterprises and communities.

Individuals within a council or business pledge to make just two less driver-only car trips a week by transferring to walking, cycling, public transport or car pooling. By fulfilling this commitment, participants receive points which can be accumulated for rewards. Recognising the decision of individuals to make sustainable travel choices is a great way of promoting a healthy, green lifestyle.

Going Places is an effective, practical way for councils and businesses to implement their sustainability principles together. Going Places is easily expandable to include additional departments within organisations or vendors outside.
